

ELDORADO SOLAR
SALINE COUNTY, ILLINOIS

JOB CREATION

Eldorado Solar's 18-month construction timeline will support approximately 500 workers during peak activity. 2 full-time and 10 part-time on-site personnel will operate and maintain the facility.

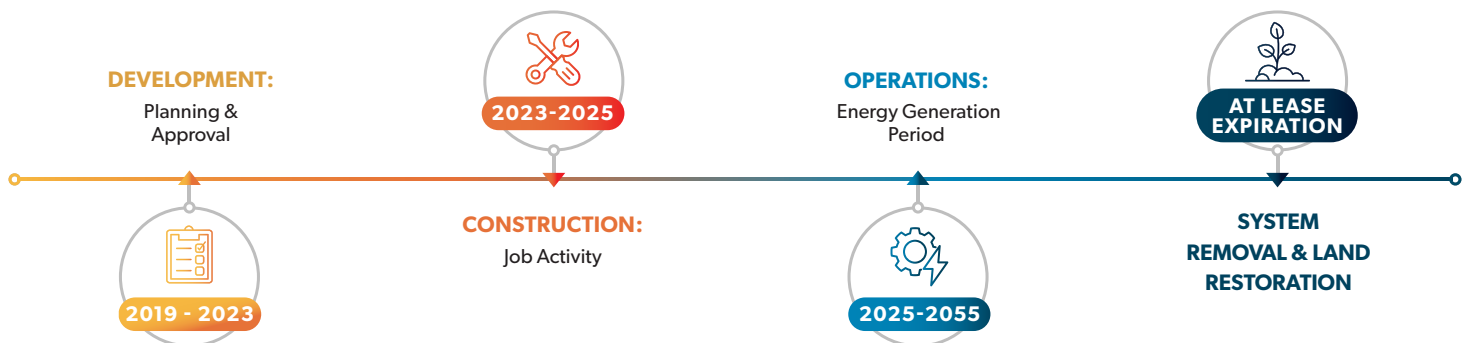

COMMUNITY IMPACT

Eldorado Solar supports Saline County organizations and initiatives that give back to the region through sponsorships and donations. In its first year of operations, Eldorado Solar will donate approximately \$1.5 million to organizations that support youth education, workforce development, energy bill savings and other community needs.

ENVIRONMENTAL IMPACT

Eldorado Solar will also feature agrivoltaics - the co-location of agriculture and solar - in several project areas. Some plots will grow Kernza, a deep-rooted perennial grain, while others will partner with a local community organization to support and provide land for new farmers. Eldorado Solar is also planted with pollinator habitat to promote biodiversity around the project.

LASTING REVENUE

Over its 35-year operation, the facility will inject an estimated \$42 million into the regional economy through property taxes. Of that amount, \$23 million will be delivered to local schools.

HARNESSING THE SUN - AND MORE

Solar energy is a renewable and reliable source of power that strengthens the nation's energy portfolio. Modern solar technologies have become more cost-effective and efficient, making solar an attractive solution for clean and sustainable electricity.

The 300 MW facility will utilize U.S.-manufactured solar panels and racking equipment. At the end of the project life, all installed equipment will be removed, dismantled, and reused or recycled where possible. The land will be returned to pre-construction condition.

The project features perennial prairie habitat, supporting pollinator species, as well as agrivoltaics plots producing crops in conjunction with solar energy. This dual-use project prioritizes soil health, continued agricultural production, and support for the ecosystem around the project.

Sol Systems is an Independent Power Producer (IPP) committed to building, owning, and managing clean energy infrastructure that benefits local communities. With over 7 GW of projects across 38 states, Sol integrates energy storage and grid resiliency solutions to deliver reliable, sustainable power to Fortune 500 companies, municipalities, utilities, and schools. Through strategic partnerships and community reinvestment, Sol ensures clean energy development drives long-term economic and environmental benefits. Founded in 2008 and led by its founder, Sol Systems is dedicated to shaping an energy future we can all believe in.
